

DKL *SilentGuard*

Passive Human-Specific Unattended Sensor

SilentGuard overcomes the main flaw in all previous intrusion and sensor technologies: the frequent false alarms caused by animals or the environment. **SilentGuard** eliminates these false alarms by detecting only the specific ultra low frequency (ULF) electric field generated by a human, rather than simply motion or heat.

Capabilities:

- Discriminates the human electric field from animals/materials
- 24/7 passive technology is undetectable when in use
- Real-time alert when people enter structure or breach perimeter
- Sensor may be installed in walls/floors/ceilings
- Does not interfere with other sensors or electronics
- Can be configured to work in a wide variety of applications - both portable and fixed

Potential Uses Include:

- Leave-behind monitor for cleared building re-entry alert
- Portable or Fixed Perimeter and Border Security
- Building Security

Alert if re-entry has been attempted
